**Subject:** RE: MVP project question ESS Log 35246

Megan,

While the current karst hazard assessment addresses known karst features and no additional surveys are warranted at this time, there is the potential that an unknown/undocumented karst feature may be encountered during construction. If additional karst features are discovered before or during construction, then either additional mitigatory measures or surveys for the Ellet Valley millipede may be needed. If you have any questions, please feel free to contact me.

Rick
